Your Website

# What is HTML?

HTML stands for HyperText Markup  
Language.

**HTML**

# Structure of a web page

```
<html>
  <body>
    <p>Indicates a paragraph</p>
  </body>
</html>
```

This hierarchy  
structure is called  
the **DOM**:

**The Document  
Object Model**

# Anatomy of an HTML Tag

Each tag has a "start tag", "end tag", some content in between, and optional attributes.

```
<tagname attribute="value">  
    content  
</tagname>
```

Think of a tag as a "command" to the browser and of the attributes as modifiers of that command.

# <!DOCTYPE html>

```
<!DOCTYPE html>
<html>
</html>
```

The **doctype** isn't an actual tag, but it needs to be at start at every HTML page to tell browser which version of HTML you're using.

***The <html> tag is always the first, root tag in the page.***

# <body>

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title>Title of your page goes here</title>
  </head>
  <b><body></b>
    Bulk of your content here.
  </b></body>
</html>
```

The <body> contains the actual content of the page.

# <head>

```
<!DOCTYPE html>
<html>
<head>
<meta charset="utf-8">
<title>Title of your page goes here</title>
</head>
</html>
```

The <head> contains "meta" information about the page, information that the browser needs before rendering.

What Goes In  
`<body> ?? </body>`

# <p> Paragraph Tags </p>

```
<body>  
<p>Paragraph 1</p>  
<p>Paragraph 2</p>  
<p>Paragraph 3</p>  
</body>
```

Paragraph 1  
Paragraph 2  
Paragraph 3

# <h1> Headline Tags </h1>

```
<body>  
<h1>Header 1</h1>  
...  
<h6>Header 6</h6>  
</body>
```

Header 1

Header 6

# Line Break Tags <br>

```
<body>
<p>
Imagine there's no Heaven <br>
It's easy if you try <br>
No hell below us <br>
</p>
</body>
```

Imagine there's no Heaven  
It's easy if you try  
No hell below us

*Notice: This tag does not need to be closed, since it doesn't encapsulate anything.*

# <ul> Unordered List Tags </ul>

```
<body>
<ul> Unordered List
<li>Item 1</li>
<li>Item 2</li>
...
</ul>
</body>
```

Unordered List

- Item 1
- Item 2

...

# <ol>Ordered List Tags </ol>

```
<body>
<ol> Ordered List
<li>Item 1</li>
<li>Item 2</li>
...
</ol>
</body>
```

Ordered List

1. Item 1
2. Item 2

...

# <div> Div Tag </div>

```
<body>
<div style="color: #0000FF">
    <h1>This is a Main Heading</h1>
    <h2>This is a Sub-Heading</h2>
</div>
</body>
```

This is a Main Heading  
This is a Sub-Heading

# <section> Section Tag </section>

```
<body>
<section>
  <h1>This is a Main Heading</h1>
  <p>This text might be an
  introduction to the rest of the
  page.</p>
</section>
</body>
```

**This is a Main Heading**

This text might be an introduction to the rest of the page.

# <article> Article Tag </article>

```
<body>
<article>
  <h1>Awesome article</h1>
  <p>Lots of awesome text.</p>
</article>
</body>
```

**Awesome article**

Lots of awesome text.

# <nav>Nav element </nav>

```
<body>
<nav>
<ul>
  <li><a href="/">Home</a></li>
  <li><a href="/about">About</li>
  <li><a href="/works">Works</li>
</ul>
</nav>
</body>
```

Navigation

[Home](#)

[About](#)

[Works](#)

# <button>button tag </button>

```
<body>  
<button>Click me</button>  
</body>
```

Click me

# HTML Readability

- Use quotes around attributes
- Indent to represent nesting
- Use same capitalization

Bad :(

```
<ul><li><a href=http://www.google.com>Google</a></li>
<LI>Yahoo</LI></UL>
```

Good :D

```
<ul>
  <li><a href="http://www.google.com">Google</a></li>
  <li>Yahoo</li>
</ul>
```

# <!-- HTML Comments -->

```
<!-- I can comment for humans here. -->
```

```
<!--
```

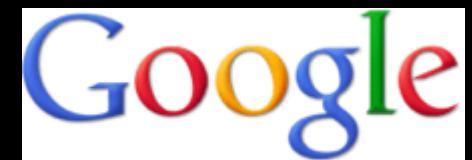

```
I can write a comment that  
spans multiple lines too.
```

```
-->
```

# <img src = “Images”>

```

```

```

```

# <a href= “Links”>

```
<a href="http://www.google.com">Google</a>
```

Google

```
<a href="http://www.google.com">  
   
</a>
```

```
<a href="http://www.google.com" target="_blank">Google  
(in new window)</a>
```

Google (in new  
window)

# <id= “id’s”>

```
<h1 id="chapter1">Chapter 1</h1>  
  
<p>Most exciting story in the world. To be continued...</p>
```

Every **HTML** element can carry the **id** attribute. It is used to uniquely identify that element from other elements on the page. Its value should start with a letter or an underscore (not a number or any other character).

# <class= “classes”>

```
<h1 class ="warning">Warning!!!</h1>  
  
<p>Most exciting story in the world. To be continued...</p>
```

Every **HTML** element can also carry a **class** attribute.  
Sometimes, rather than uniquely identifying one element within a document, you will want a way to identify several elements as being different from the other elements on the page.

# <a href=“#InternalLinks”>

```
<p>Jump to <a href="#chapter1">the first chapter!</a> </p>

<h1 id="chapter1">Chapter 1</h1>

<p>Most exciting story in the world. To be continued...</p>

<p>Read more on
<a href="http://en.wikipedia.org/wiki/Fox#Diet">Wikipedia</a>
</p>
```

What Goes In  
`<head> ?? </head>`

# <head>

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title>Title of your page goes here</title>
  </head>
</html>
```

The <head> contains "meta" information about the page, information that the browser needs before rendering.

# <title> Title </title>

```
<!DOCTYPE html>
<html>
<head>
<title>Title of your page goes here</title>
</head>
</html>
```

Your website's title

# <meta charset="utf-8">

```
<!DOCTYPE html>
<html>
<head>
<meta charset="utf-8">
</head>
</html>
```

Character encoding

# CSS

# What Is CSS?

**CSS** = Cascading Style Sheets

**CSS** is a "style sheet language" that lets you style the elements on your page.

**CSS** is embedded inside **HTML**, but it is ***not* HTML** itself

# What Can It Do?

text

color

size

position

# Anatomy of CSS

CSS consists of "style rules". Each style rule consists of a "**selector**" and "**declarations**" of **property-value** pairs:

```
selector {  
  property: value;  
  property: value;  
}
```

```
body {  
  color: yellow;  
  background-color: black;  
}
```

# Coding Conventions

It is possible to write  
CSS like this:

```
selector{property:values;}selector{property:values;}
```

But it's preferred to write  
it like this:

```
selector {  
    property:values;  
}  
  
selector {  
    property:values;  
}
```

*Notice: space between "selector"  
and "{", 2 spaces before property-  
value pair, space after "property:",  
semi-colon after "values", line  
between rules.*

# <style> CSS In HTML </style>

CSS can be embedded in HTML in several ways. One way is to include all CSS in a `<style>` tag, usually inside the head tag:

```
<html>
<head>
<style>
body {
  color: yellow;
  background-color: black;
}
</style>
</head>
```

# <link rel = "External CSS File"

CSS can also be defined in a **separate file**.

Linked stylesheet:

```
<head>
<link rel="stylesheet" type="text/css" href="main.css"
>
</head>
```

# <link rel ="Google Fonts"

To add google fonts all you have to do is add a special stylesheet link to your **HTML** document, then refer to the font in a **CSS** style.

Linked stylesheet:

```
<head>
<link rel="stylesheet" type="text/css" href="http://fonts.
googleapis.com/css?family=Font+Name">
</head>
```

# <link rel ="Google Fonts"

Linked stylesheet:

```
<head>
<link rel="stylesheet" type="text/css" href="http://fonts.
googleapis.com/css?family=Tangerine">
</head>
```

Assigned font style:

```
<style>
  body {
    font-family: 'Tangerine', serif;
    font-size: 48px;
  }
</style>
```

# Naming Conventions

Some rules to follow when making IDs and class names:

- Describe the content, not the presentation ("warning", *not "redbox"*).
- Use all lowercase, and hyphens when needed for readability ("header-info", *not "headerInfo"*).
- Use hyphens to show that a class or ID is part of something else. (e.g. "footer", "footer-copyright", and "footer-logo").

# /\*Comments\*/

```
/* Comment here */  
p  
{  
margin: 1em; /* Comment here */  
padding: 2em;  
/* color: white; */  
background-color: blue;  
}  
  
/*  
multi-line  
comment here  
*/
```

/\*Comments\*/ will be ignored by the browser and are useful for documenting your styles to other humans or commenting out rules.
